Nine studies compared surgical with medical management (n=1,376). Surgical management was more likely than medical management to induce complete evacuation of conception products (RD 32.8%, 95% CI: 14.4, 51.1; p<0.001) with an NNT of 3. However, there was significant heterogeneity between the studies (p<0.001). Patient satisfaction did not significantly differ between surgical and medical management.
